PROFILE SUMMARY

Final-year Software Engineering undergraduate with hands-on experience in full-stack development, machine learning integration, REST API design, and cross-platform mobile development. Delivered production-ready projects using Python, Flutter, and Hugging Face models. Eager to grow further in the IT field through hands-on work and collaboration.

TECHNICAL SKILLS

Languages: Python, Dart, JavaScript, HTML, CSS, SQL

Frameworks & Libraries: Flask, Flutter, sentence-transformers (all-MiniLM), scikit-learn, Hugging Face Transformers (CLIP, Whisper, BLIP)

Databases: SQLite, MySQL

Tools & Platforms: Git, GitHub, Visual Studio Code, Hugging Face Spaces

Methodologies: REST API Design, Agile Development, Machine Learning Integration, Semantic Search (BM25 + Embeddings), Image Recognition, Voice Processing, OOP

PROJECTS

ChefGPT: Recipe Recommendation System using Machine Learning

Python · Flask · Flutter · SQLite · Hugging Face · sentence-transformers · CLIP · Whisper · BLIP

- Engineered a full-stack AI recipe recommendation platform supporting text, voice, and image input, achieving multimodal ingredient detection across web and mobile using pre-trained ML models
- Improved ingredient recognition accuracy by integrating BLIP (image-to-text), Whisper (voice-to-text), and all-MiniLM semantic embeddings, replacing manual keyword search with context-aware matching
- Designed and deployed a RESTful Flask backend API to Hugging Face Spaces, enabling cross-platform access for a Flutter mobile frontend with user accounts, recipe saving, and a ratings/feedback system

- Implemented BM25 + embedding hybrid search pipeline to increase recipe match relevance over single-model retrieval

IOT Based Smart Parking System

Arduino Uno · IR Sensor · LED Components · Hardware Prototyping

- Built an IoT parking prototype using IR sensors and Arduino Uno to detect real-time vehicle slot occupancy, reducing manual monitoring effort to zero for a simulated 6-slot parking environment
- Reduced false-positive detection errors by calibrating IR sensor thresholds during embedded logic programming in Arduino IDE, improving system reliability during team testing sessions
- Collaborated in a 2-person team to complete hardware wiring and embedded programming within a 4-week project timeline, delivering a functional physical prototype using structured cardboard modelling.

Event Management System

PHP · MySQL · XAMPP · HTML · CSS · JavaScript

- Developed a full-stack web-based event management system supporting two user roles: regular users and admins
- Regular users can browse available rooms and submit bookings by selecting preferred room, date, and time slot
- Admin users have full CRUD control over rooms, bookings, and user accounts via a dedicated dashboard
- Built using a PHP + MySQL backend on XAMPP with a responsive HTML/CSS/JS frontend

IftarStreet E-Commerce Web Application

ASP.NET Web Forms · C# · MS SQL Server · ADO.NET · HTML/CSS · JavaScript

- Developed a full-stack ASP.NET e-commerce application utilizing C# code-behind for dynamic cart state management, tax aggregation, and order checkout processing
- Architected a secure Data Access Layer with ADO.NET, executing parameterized SQL stored procedures to mitigate injection risks during database CRUD operations
- Implemented a Role-Based Access Control (RBAC) system using session state and PBKDF2 cryptographic hashing to strictly isolate administrative and customer privileges

- Bound backend MS SQL datasets to ASP.NET GridView controls for real-time rendering, unifying the frontend architecture via hierarchical Master Pages
-

WORK EXPERIENCE

IT Internship (Service Management)

UDA Holdings Sdn Bhd

July 2023 – October 2023 | W.P Kuala Lumpur

- Streamlined IT procurement documentation accuracy by 100% by digitizing and maintaining records using an Electronic Document Management System (EDMS), eliminating paper-based filing across multiple departments
 - Supported budget allocation reporting for 4+ IT departments by compiling structured cost documentation, enabling faster management review cycles
 - Improved asset lifecycle efficiency by coordinating the decommissioning and return of end-of-life PCs to the leasing vendor, ensuring zero compliance issues during the hardware disposal audit
 - Increased staff compliance awareness by designing and distributing a company-wide IT reminder poster via digital blast to all employees, reaching the full organization in a single deployment cycle
 - Gained foundational exposure to IT procurement workflows, stakeholder management, and organizational needs assessment within an enterprise IT environment
-

EDUCATION

Bachelor of Information Technology (Hons) In Software Engineering

Universiti Kuala Lumpur MIIT

Mar 2024 – Mar 2027

Diploma In Computer Science

Kolej Profesional Mara

July 2021 – Oct 2023

CERTIFICATIONS

- Google Project Management Certificate, Agile Project Management
 - Google Project Management Certificate, Foundations of Project Management
 - Google Project Management Certificate, Project Planning
-
