PROFILE SUMMARY

I am a final-year Software Engineering undergraduate with a strong passion for technology and software development. While still building professional experience, I have been actively developing real-world projects, including an AI-powered recipe recommendation system that integrates machine learning, mobile development, and backend API design. I enjoy learning new tools and technologies, and I am eager to grow further in the IT field through hands-on work and collaboration.

TECHNICAL SKILLS

Languages: Python, Dart, JavaScript, HTML, CSS, SQL

Frameworks & Libraries: Flask, Flutter, sentence-transformers (all-MiniLM), scikit-learn, Hugging Face Transformers (CLIP, Whisper, BLIP)

Databases: SQLite, MySQL

Tools & Platforms: Git, GitHub, Visual Studio Code, Hugging Face Spaces

Concepts: REST API Design, Machine Learning Integration, Image Recognition, Voice Processing, Semantic Search (BM25 + Embeddings), Web App Development, Mobile App Development

PROJECTS

ChefGPT: Recipe Recommendation System using Machine Learning

Python · Flask · Flutter · SQLite · Hugging Face · sentence-transformers · CLIP · Whisper · BLIP

- Developed a full-stack recipe recommendation web and mobile application that accepts text, voice, and image input to identify ingredients and suggest personalized meals using a machine learning pre-trained models.
- Integrated BLIP for ingredient image recognition, Whisper for voice-to-text input, and all-MiniLM embeddings for semantic recipe matching.
- Built a RESTful Flask backend API deployed on Hugging Face Spaces and a cross-platform Flutter for mobile frontend.
- Implemented user accounts, recipe saving, ML-based suggestions, and a ratings/feedback system.

IOT Based Smart Parking System

Arduino Uno · IR Sensor · LED Components · Hardware Prototyping

- Designed and built an IoT prototype that detects vehicle presence in parking slots using IR sensors connected to an Arduino Uno.
- Implemented red and green LED indicators to display real-time parking slot availability to users.
- Constructed a physical prototype from scratch using cardboard, simulating a real parking lot environment.
- Collaborated in a team to handle both the hardware wiring and the embedded logic programming in the Arduino IDE.

Event Management System

PHP · MySQL · XAMPP · HTML · CSS · JavaScript

- Developed a full-stack web-based event management system supporting two user roles: regular users and admins
 - Regular users can browse available rooms and submit bookings by selecting preferred room, date, and time slot
 - Admin users have full CRUD control over rooms, bookings, and user accounts via a dedicated dashboard
 - Built using a PHP + MySQL backend on XAMPP with a responsive HTML/CSS/JS frontend
-

Experience

IT Internship (Service Management)

UDA Holdings Sdn Bhd

July 2023 – October 2023 | W.P Kuala Lumpur

- Gained foundational understanding of IT procurement processes, including stakeholder roles, procurement workflows, and organizational need assessment
 - Assisted in budget allocation documentation across multiple departments within the IT division
 - Managed and maintained records using an Electronic Document Management System (EDMS) for procurement documentation purposes
 - Coordinated the decommissioning and return of end-of-life PCs to the leasing company, ensuring proper asset disposal procedures
 - Designed and distributed an internal company-wide reminder poster via digital blast to all staff
-

EDUCATION

Bachelor of Information Technology (Hons) In Software Engineering

Universiti Kuala Lumpur MIIT

Mar 2024 – Mar 2027

Diploma In Computer Science

Kolej Profesional Mara

July 2021 – Oct 2023
